PROFESSIONAL SUMMARY

Results-driven Software Developer with 6+ years of professional experience in full-stack and backend development across fintech, healthcare, agri-tech, e-learning, and enterprise domains. Proven expertise in designing and delivering scalable, production-grade systems using PHP (Laravel, Symfony), Node.js (NestJS, AdonisJS, ExpressJS), Python, JavaScript, and TypeScript. Experienced in microservices and monolithic architecture design, RESTful API development, database optimization, CI/CD pipelines, and AI/NLP integrations. Demonstrated leadership as Lead Developer on multiple complex projects — owning database design, code review processes, DevOps workflows, and cross-functional team collaboration. Committed to engineering best practices, clean architecture, and delivering measurable business impact.

TECHNICAL SKILLS

Back-End: Node.js, NestJS, AdonisJS, ExpressJS, PHP, Laravel, Python, TypeScript, JavaScript, Java, Java Swing, OOP

Front-End: ReactJS, Next.js, VueJS, JavaScript, ES6, HTML5, CSS3, Bootstrap

Databases: MySQL, PostgreSQL, MongoDB, Firebase (Realtime DB & Push Notifications)

Cloud & DevOps: AWS (EC2, S3), Jenkins, DeployHQ, GitHub Actions, Git, GitHub

Architecture: Microservices Architecture, Monolithic Architecture, MVC, REST API Design, Role-Based Access Control (RBAC)

AI & NLP: OpenAI API, Prompt Engineering, Tesseract OCR, NLP-based Search, Document Classification

Payments & Integrations: Stripe, MCB Payment Gateway, Bank Alfalah Payment Gateway, Firebase Cloud Messaging (FCM), E-Sign Services

WORK EXPERIENCE

Software Developer (Tier 3) | Genetech Solutions | 2021 – Present

- Led end-to-end architecture and development of multiple production-grade web and mobile applications across fintech, health, agri-tech, e-learning, and marketplace domains.
- Designed system architectures spanning microservices and monolithic patterns, selecting the right approach based on project scale and requirements.
- Built and consumed RESTful APIs for web and mobile clients using Node.js (NestJS, AdonisJS) and PHP (Laravel).
- Acted as Lead Developer on key projects — owning database design, defining API contracts, conducting code reviews, and managing GitHub PR workflows.
- Established and maintained CI/CD pipelines using Jenkins and DeployHQ, streamlining deployments to AWS EC2 and S3.
- Integrated AI/NLP capabilities including OpenAI API, Tesseract OCR, and prompt engineering into production applications.
- Mentored junior developers and enforced coding standards, ensuring maintainable and scalable codebases across the team.

Software Engineer | DTS (Digital Transformation Systems) | January 2020 – November 2021

- Developed and maintained web and desktop applications using PHP, Java, MySQL, JavaScript, HTML, CSS, and Bootstrap.
- Integrated MySQL databases for efficient data management, ensuring smooth transactions and optimal application performance.
- Collaborated with cross-functional teams to meet project requirements and deliver on schedule.

- Enhanced user experience through responsive front-end design using Bootstrap and custom CSS.

PROJECTS

LoanClod – Fintech Loan Management Portal — *PHP Laravel, JavaScript, MySQL, HTML, CSS*

- Built a multi-tenant fintech portal for end-to-end loan lifecycle management with custom domain-based architecture for multiple financial institutions.
- Implemented paperless documentation, e-sign integration, borrower task management, and role-based admin/supervisor dashboards.
- Designed RBAC system for bank admins, supervisors, and borrowers with full audit trail and document tracking.

↳ Sub-Project: AI Document Classification Engine — *Python, Tesseract OCR, OpenAI API, Prompt Engineering*

- Led development of an AI-powered document classification tool using Tesseract OCR for text extraction and OpenAI API with custom prompt engineering for intelligent document-to-task mapping.
- Enabled bulk multi-document uploads with automatic classification, significantly accelerating borrower onboarding and reducing manual loan officer workload.

Dayzee Farms – Agri-Tech Livestock & E-Commerce Platform — *Node.js, React Native, MySQL, Jenkins, AWS EC2/S3, MCB & Bank Alfalah Gateways*

- Led as Lead Developer — owned full database architecture design, API development, and DevOps for a multi-platform agri-tech ecosystem (web, mobile, admin panel).
- Integrated MCB and Bank Alfalah payment gateways; implemented 2FA for secure transactions across all client platforms.
- Built a Technician (Artificial Insemination) mobile app with order acceptance and real-time delivery tracking workflow.
- Set up Jenkins CI/CD pipelines with automated deployments to AWS EC2; managed GitHub PR reviews and branching strategy.

EnrichKids – Online Kids Learning Platform — *Node.js, NestJS, TypeScript, Next.js, MySQL, Stripe, Microservices*

- Designed and implemented backend microservices architecture using Node.js and NestJS (TypeScript) for an e-commerce-style e-learning platform.
- Built RESTful APIs for course management, authentication, institution onboarding, and Stripe payment processing.
- Developed institution self-registration and course publishing workflow enabling independent providers to list and sell courses.

340B Price Guide – Healthcare Drug Pricing & Consulting Platform — *PHP Laravel, MySQL, Python, NLP, CSV Processing*

- Optimized critical SQL queries, significantly improving global search performance across large pharmaceutical datasets.
- Re-engineered CSV bulk import pipelines for drug names, pricing, and classifications — improving upload speed and reliability.
- Implemented NLP-based conversational search, enabling natural language drug catalogue queries via a chat-style interface.

Tradefindry – Interior Decorators & Vendors Marketplace — *Node.js, AdonisJS, ReactJS, MySQL, Firebase*

- Built a two-sided marketplace with RESTful APIs (Node.js/AdonisJS), ReactJS frontend, and Firebase push notifications.
- Implemented RBAC for admin, designer, and vendor roles; built designer editor boards, vendor catalogue, geolocation search, and event scheduler.

Tamam – Public Survey Application — *PHP Laravel, VueJS, MySQL, Firebase*

- Developed a full-stack survey platform with dynamic form builder, scheduling, and SMS/Firebase notification delivery.
- Built separate mobile and admin panels; improved product feedback collection through a seamless user experience.

O2W – Crypto Mining Remote Control Portal — *Node.js, ExpressJS, ReactJS, JavaScript*

- Developed a web portal for real-time remote monitoring and control of crypto mining machines with individual/group start-stop commands.
- Integrated crypto wallet management with secure peer-to-peer transfer functionality.

Pakistan Drug Manual – Desktop Application — *Java, Java Swing, OOP, MySQL*

- Built a Windows desktop application for searching pharmaceutical products with manufacturer, distributor, and pricing data.
- Designed using OOP principles with an intuitive Java Swing GUI for non-technical end users.

EDUCATION

MS – Computer Science & IT | NED University of Engineering & Technology | 2023

BS – Computer Science | University of Sindh | 2019
